Margin of error: +/-1.8%.

YouGov Blue

This survey is based on 3,320 interviews conducted by YouGov on the internet of registered voters in Arizona, Georgia, Michigan, North Carolina, Nevada, Ohio, Pennsylvania, and Wisconsin who are 18-29. The sample was weighted according to gender, age, race/ethnicity, education, and Arizona, Georgia, Michigan, North Carolina, Nevada, Ohio, Pennsylvania, and Wisconsin geographic region based on voter registration lists, the U.S. Census American Community Survey, and the U.S. Census Current Population Survey, as well as 2020 Presidential vote and approximate 2024 Presidential vote based on available results. Respondents were selected from YouGov to be representative of 18-29 year old registered voters. The weights range from NA to NA with a mean of NA and a standard deviation of NA.

The margin of error (a 95% confidence interval) for a sample percentage p based upon the subsetting sample is approximately 1.8%. It is calculated using the formula:

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
